Patent Locked Forks and Hooks.

Patented August 31st, 1886.

This is the best improvement ever applied to handling Forks and Hooks. The manner of bridling or locking the fork in the handle, prevents it from ever becoming loose, and also takes the strain off the shank and centering strength where it is most needed. The Ferrule end has a cap with a rivet passing through it, and the cavity at end is filled with metal, which also keeps out moisture and prevents the handle from decaying.

Especially adapted to Spading or Digging Forks.

Patented Locked Manure and Hay Forks.

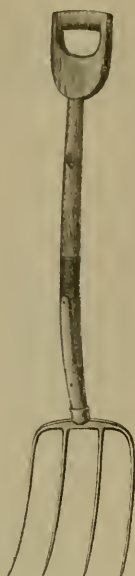

Patented August 31st, 1886.

Solid Steel Shanks, Double Capped Ferrules.

PER DOZ.
